Mathematical Statement

A mathematical statement consists of a set of preconditions and a set of conclusions.

The statement is true if the conclusions are true whenever the preconditions are true.

German: mathematische Aussage, Voraussetzung, Folgerung/Konklusion, wahr

Notes:

- set of preconditions is sometimes empty
- often, "assumptions" is used instead of "preconditions"; slightly unfortunate because "assumption" is also used with another meaning (\rightsquigarrow cf. indirect proofs)

A3. Proof Techniques

Examples of Mathematical Statements

Examples (some true, some false):

▶ "Let $p \in \mathbb{N}_0$ be a prime number. Then p is odd."

- ► "There exists an even prime number."
- ▶ "Let $p \in \mathbb{N}_0$ with p > 3 be a prime number. Then p is odd."
- "All prime numbers p > 3 are odd."
- "For all sets A, B, C: $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$ "
- "The equation $a^k + b^k = c^k$ has infinitely many solutions with $a, b, c, k \in \mathbb{N}_1$ and k > 2."
- ▶ "The equation $a^k + b^k = c^k$ has no solutions with $a, b, c, k \in \mathbb{N}_1$ and k > 3."

Which ones are true, which ones are false?

A3. Proof Techniques

February 22, 2017

A3. Proof Techniques Introduction

Disproofs

- ► A disproof (refutation) analogously shows that a given mathematical statement is false by giving an example where the preconditions are true, but the conclusion is false.
- ▶ This requires deriving, in a sequence of proof steps, the opposite (negation) of the conclusion.

German: Widerlegung

- Formally, disproofs are proofs of modified ("negated") statements.
- ▶ Be careful about how to negate a statement!

Proof

Proofs

A proof derives the correctness of a mathematical statement from a set of axioms and previously proven statements.

It consists of a sequence of proof steps, each of which directly follows from the axioms, previously proven statements and the preconditions of the statement, ending with the conclusions of the theorem.

German: Beweis, Axiom, Beweisschritt

Malte Helmert (University of Basel)

Theory of Computer Science

Proof Strategies

typical proof/disproof strategies:

- "All $x \in S$ with the property P also have the property Q." "For all $x \in S$: if x has property P, then x has property Q."
 - ▶ To prove, assume you are given an arbitrary $x \in S$ that has the property P. Give a sequence of proof steps showing that x must have the property Q.
 - ▶ To disprove, find a counterexample, i. e., find an $x \in S$ that has property P but not Q and prove this.

Malte Helmert (University of Basel)

Theory of Computer Science

Malte Helmert (University of Basel)

Theory of Computer Science

Proof Strategies

typical proof/disproof strategies:

- "A is a subset of B."
 - ▶ To prove, assume you have an arbitrary element $x \in A$ and prove that $x \in B$.
 - ▶ To disprove, find an element in $x \in A \setminus B$ and prove that $x \in A \setminus B$.

Malte Helmert (University of Basel)

Theory of Computer Science

Introduction

A3. Proof Techniques

Proof Strategies

typical proof/disproof strategies:

③ "For all $x \in S$: x has property P iff x has property Q."

("iff": "if and only if")

- \blacktriangleright To prove, separately prove "if P then Q" and "if Q then P".
- ▶ To disprove, disprove "if P then Q" or disprove "if Q then P".

German: "iff" = gdw. ("genau dann, wenn")

Malte Helmert (University of Basel)

Theory of Computer Science

February 22, 2017

A3. Proof Techniques

Proof Strategies

typical proof/disproof strategies:

- "A = B", where A and B are sets.
 - ▶ To prove, separately prove " $A \subseteq B$ " and " $B \subseteq A$ ".
 - ▶ To disprove, disprove " $A \subseteq B$ " or disprove " $B \subseteq A$ ".

A3. Proof Techniques

Proof Techniques

most common proof techniques:

- direct proof
- indirect proof (proof by contradiction)
- contraposition
- mathematical induction
- structural induction

German: direkter Beweis, indirekter Beweis (Beweis durch Widerspruch), Kontraposition, vollständige Induktion, strukturelle Induktion

A3. Proof Techniques Direct I

Direct Proof: Example

Theorem (distributivity)

For all sets A, B, C: $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$.

Proof.

We first show that $x \in A \cap (B \cup C)$ implies $x \in (A \cap B) \cup (A \cap C)$ ("only-if" part, " \Rightarrow " part, " \subseteq " part):

Let $x \in A \cap (B \cup C)$. Then $x \in A$ and $x \in B \cup C$.

If $x \in B$ then, because $x \in A$ is true, $x \in A \cap B$ must be true.

Otherwise, because $x \in B \cup C$ we know that $x \in C$ and thus with $x \in A$. that $x \in A \cap C$.

In both cases $x \in A \cap B$ or $x \in A \cap C$, and we conclude $x \in (A \cap B) \cup (A \cap C)$.

German: Hin-Richtung

A3. Proof Techniques

Direct Proof: Example

Theorem (distributivity)

For all sets A, B, C: $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$.

Proof (continued).

"if" part, " \Leftarrow " part, \supseteq part: we must show that $x \in (A \cap B) \cup (A \cap C)$ implies $x \in A \cap (B \cup C)$.

Let $x \in (A \cap B) \cup (A \cap C)$.

If $x \in A \cap B$ then $x \in A$ and $x \in B$.

The latter implies $x \in B \cup C$ and hence $x \in A \cap (B \cup C)$.

If $x \notin A \cap B$ we know $x \in A \cap C$ due to $x \in (A \cap B) \cup (A \cap C)$.

This (analogously) implies $x \in A$ and $x \in C$, and hence $x \in B \cup C$ and thus $x \in A \cap (B \cup C)$.

In both cases we conclude $x \in A \cap (B \cup C)$.

German: Rückrichtung

A3. Proof Techniques Direct Proo

Direct Proof: Example

Theorem (distributivity)

For all sets A, B, C: $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$.

Proof (continued).

We have shown that every element of $A \cap (B \cup C)$ is an element of $(A \cap B) \cup (A \cap C)$ and vice versa. Thus, both sets are equal.

Malte Helmert (University of Basel)

A3. Proof Techniques Indirect Proof

A3.3 Indirect Proof

A3. Proof Techniques

Indirect Proof

Indirect Proof

Indirect Proof (Proof by Contradiction)

- ▶ Make an assumption that the statement is false.
- ▶ Derive a contradiction from the assumption together with the preconditions of the statement.
- ► This shows that the assumption must be false given the preconditions of the statement, and hence the original statement must be true.

German: Annahme, Widerspruch

Malte Helmert (University of Basel)

Theory of Computer Science

February 22, 2017

20 / 38

Indirect Proof: Example

Theorem

There are infinitely many prime numbers.

Proof.

Assumption: There are only finitely many prime numbers.

Let $P = \{p_1, \dots, p_n\}$ be the set of all prime numbers.

Define $m = p_1 \cdot \ldots \cdot p_n + 1$.

Since $m \ge 2$, it must have a prime factor.

Let p be such a prime factor.

Since p is a prime number, p has to be in P.

The number m is not divisible without remainder by any of the numbers in P. Hence p is no factor of m.

→ Contradiction

Mathematical Induction

Mathematical Induction: Example I

Theorem

For all $n \in \mathbb{N}_0$ with $n \ge 1$: $\sum_{k=1}^n (2k-1) = n^2$

Proof.

Mathematical induction over n:

basis
$$n = 1$$
: $\sum_{k=1}^{1} (2k - 1) = 2 - 1 = 1 = 1^2$ IH: $\sum_{k=1}^{m} (2k - 1) = m^2$ for all $1 \le m \le n$ inductive step $n \to n + 1$:

$$\sum_{k=1}^{n+1} (2k-1) = \left(\sum_{k=1}^{n} (2k-1)\right) + 2(n+1) - 1$$

$$\stackrel{\text{IH}}{=} n^2 + 2(n+1) - 1$$

$$= n^2 + 2n + 1 = (n+1)^2$$

Malte Helmert (University of Basel)

Theory of Computer Science

February 22, 2017

A3. Proof Techniques

Mathematical Induction

Mathematical Induction: Example II

Theorem

Every natural number n > 2 can be written as a product of prime numbers, i. e. $n = p_1 \cdot p_2 \cdot \ldots \cdot p_m$ with prime numbers p_1, \ldots, p_m .

Proof.

Mathematical Induction over n:

basis n = 2: trivially satisfied, since 2 is prime

IH: Every natural number k with $2 \le k \le n$ can be written as a product of prime numbers. A3. Proof Techniques

Mathematical Induction

Mathematical Induction: Example II

Theorem

Every natural number n > 2 can be written as a product of prime numbers, i. e. $n = p_1 \cdot p_2 \cdot \ldots \cdot p_m$ with prime numbers p_1, \ldots, p_m .

Proof (continued).

inductive step $n \rightarrow n + 1$:

- ▶ Case 1: n+1 is a prime number \rightsquigarrow trivial
- ightharpoonup Case 2: n+1 is not a prime number. There are natural numbers $2 \le q, r \le n$ with $n+1 = q \cdot r$. Using IH shows that there are prime numbers

$$q_1,\ldots,q_s$$
 with $q=q_1\cdot\ldots\cdot q_s$ and

$$r_1, \ldots, r_t$$
 with $r = r_1 \cdot \ldots \cdot r_t$.

Together this means $n+1=q_1\cdot\ldots\cdot q_s\cdot r_1\cdot\ldots\cdot r_t$.

Inductively Defined Sets: Examples

Example (Natural Numbers)

The set \mathbb{N}_0 of natural numbers is inductively defined as follows:

- ▶ 0 is a natural number.
- ▶ If n is a natural number, then n+1 is a natural number.

Example (Binary Tree)

The set \mathcal{B} of binary trees is inductively defined as follows:

- ► □ is a binary tree (a leaf)
- ▶ If L and R are binary trees, then $\langle L, \bigcirc, R \rangle$ is a binary tree (with inner node \bigcirc).

German: Binärbaum, Blatt, innerer Knoten

Implicit statement: all elements of the set can be constructed by finite application of these rules

Structural Induction

Structural Induction: Example (1)

Definition (Leaves of a Binary Tree)

The number of leaves of a binary tree B, written leaves (B), is defined as follows:

$$leaves(\Box) = 1$$

 $leaves(\langle L, \bigcirc, R \rangle) = leaves(L) + leaves(R)$

Definition (Inner Nodes of a Binary Tree)

The number of inner nodes of a binary tree B, written inner(B), is defined as follows:

$$inner(\Box) = 0$$

 $inner(\langle L, \bigcirc, R \rangle) = inner(L) + inner(R) + 1$

Malte Helmert (University of Basel)

Theory of Computer Science

February 22, 2017

A3. Proof Techniques

Structural Induction

Structural Induction: Example (2)

Theorem

For all binary trees B: inner(B) = leaves(B) - 1.

Proof.

induction basis:

$$inner(\square) = 0 = 1 - 1 = leaves(\square) - 1$$

Malte Helmert (University of Basel)

Theory of Computer Science

February 22, 2017

A3. Proof Techniques

Structural Induction

Structural Induction: Example (3)

Proof (continued).

induction hypothesis:

to prove that the statement is true for a composite tree $\langle L, \cap, R \rangle$, we may use that it is true for the subtrees L and R.

inductive step for $B = \langle L, \bigcirc, R \rangle$:

$$inner(B) = inner(L) + inner(R) + 1$$

$$\stackrel{\mathsf{IH}}{=} (leaves(L) - 1) + (leaves(R) - 1) + 1$$

$$= leaves(L) + leaves(R) - 1 = leaves(B) - 1$$

A3. Proof Techniques Summary

Summary

▶ A proof is based on axioms and previously proven statements.

- ▶ Individual proof steps must be obvious derivations.
- direct proof: sequence of derivations or rewriting
- ▶ indirect proof: refute the negated statement
- ▶ contraposition: prove " $A \Rightarrow B$ " as "not $B \Rightarrow$ not A"
- ► mathematical induction: prove statement for a starting point and show that it always carries over to next number
- ► structural induction: generalization of mathematical induction to arbitrary recursive structures
