Discrete Mathematics in Computer Science November 25/27, 2024 — D2. Properties of Formulas and Equivalences

### D2.1 Properties of Propositional Formulas

D2.2 Equivalences

# D2.1 Properties of Propositional Formulas

### The Story So Far

- propositional logic based on atomic propositions
- syntax: which formulas are well-formed?
- semantics: when is a formula true?
- interpretations: important basis of semantics

# Reminder: Syntax of Propositional Logic

### Definition (Syntax of Propositional Logic) Let A be a set of atomic propositions. The set of propositional formulas (over A) is inductively defined as follows: Every atom $a \in A$ is a propositional formula over A. lf $\varphi$ is a propositional formula over A, then so is its negation $\neg \varphi$ . • If $\varphi$ and $\psi$ are propositional formulas over A, then so is the conjunction $(\varphi \wedge \psi)$ . lf $\varphi$ and $\psi$ are propositional formulas over A, then so is the disjunction $(\varphi \lor \psi)$ .

The implication  $(\varphi \to \psi)$  is an abbreviation for  $(\neg \varphi \lor \psi)$ . The biconditional  $(\varphi \leftrightarrow \psi)$  is an abbrev. for  $((\varphi \to \psi) \land (\psi \to \varphi))$ .

# Reminder: Semantics of Propositional Logic

Definition (Semantics of Propositional Logic) A truth assignment (or interpretation) for a set of atomic propositions A is a function  $\mathcal{I} : A \to \{0, 1\}$ . A propositional formula  $\varphi$  (over A) holds under  $\mathcal{I}$ (written as  $\mathcal{I} \models \varphi$ ) according to the following definition:  $\mathcal{I} \models a \qquad \text{iff} \qquad \mathcal{I}(a) = 1 \qquad (\text{for } a \in A)$  $\mathcal{I} \models \neg \varphi \qquad \text{iff} \qquad \text{not } \mathcal{I} \models \varphi$ 

$$\begin{array}{c} \mathcal{I} \models (\varphi \land \psi) & \text{iff} \quad \mathcal{I} \models \varphi \text{ and } \mathcal{I} \models \psi \\ \mathcal{I} \models (\varphi \lor \psi) & \text{iff} \quad \mathcal{I} \models \varphi \text{ or } \mathcal{I} \models \psi \end{array}$$

M. Helmert, G. Röger (University of Basel) Discrete Mathematics in Computer Science

# Properties of Propositional Formulas

A propositional formula  $\varphi$  is

- satisfiable if  $\varphi$  has at least one model
- unsatisfiable if  $\varphi$  is not satisfiable
- valid (or a tautology) if  $\varphi$  is true under every interpretation
- falsifiable if  $\varphi$  is no tautology

German: erfüllbar, unerfüllbar, allgemeingültig/eine Tautologie, falsifizierbar

### Examples

How can we show that a formula has one of these properties?

- ▶ Show that  $(A \land B)$  is satisfiable.  $\mathcal{I} = \{A \mapsto 1, B \mapsto 1\}$  (+ simple proof that  $\mathcal{I} \models (A \land B)$ )
- Show that  $(A \land B)$  is falsifiable.  $\mathcal{I} = \{A \mapsto 0, B \mapsto 1\}$  (+ simple proof that  $\mathcal{I} \not\models (A \land B)$ )
- Show that (A \wedge B) is not valid.
   Follows directly from falsifiability.
- Show that (A ∧ B) is not unsatisfiable. Follows directly from satisfiability.

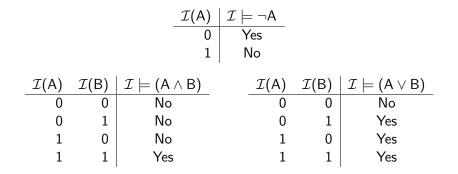

So far all proofs by specifying one interpretation.

How to prove that a given formula is valid/unsatisfiable/ not satisfiable/not falsifiable?

 $\rightsquigarrow$  must consider all possible interpretations

# Evaluate for all possible interpretations if they are models of the considered formula.

# Truth Tables in General

Similarly in the case where we consider a formula whose building blocks are themselves arbitrary unspecified formulas:

$\mathcal{I}\models\varphi$	$\mathcal{I} \models \psi$	$\mathcal{I} \models (\varphi \land \psi)$
No	No	No
No	Yes	No
Yes	No	No
Yes	Yes	Yes

### Truth Tables for Properties of Formulas

Is 
$$\varphi = ((A \rightarrow B) \lor (\neg B \rightarrow A))$$
 valid, unsatisfiable, . . . ?

$\mathcal{I}(A)$	$\mathcal{I}(B)$	$\mathcal{I} \models \neg B$	$\mathcal{I} \models (A  ightarrow B)$	$\mathcal{I} \models (\neg B \rightarrow A)$	$\mathcal{I}\models\varphi$
0	0	Yes	Yes	No	Yes
0	1	No	Yes	Yes	Yes
1	0	Yes	No	Yes	Yes
1	1	No	Yes	Yes	Yes

M. Helmert, G. Röger (University of Basel) Discrete Mathematics in Computer Science November 25/27, 2024 11 / 21

### Connection Between Formula Properties and Truth Tables

### A propositional formula $\varphi$ is

- satisfiable if φ has at least one model
   result in at least one row is "Yes"
- unsatisfiable if φ is not satisfiable
   ~ result in all rows is "No"
- valid (or a tautology) if φ is true under every interpretation ~ result in all rows is "Yes"
- falsifiable if φ is no tautology
   ~ result in at least one row is "No"

# Main Disadvantage of Truth Tables

How big is a truth table with n atomic propositions?

- 1 | 2 interpretations (rows)
- 2 4 interpretations (rows)
- 3 8 interpretations (rows)
- *n* ??? interpretations

Some examples:  $2^{10} = 1024$ ,  $2^{20} = 1048576$ ,  $2^{30} = 1073741824$ 

- $\rightsquigarrow$  not viable for larger formulas; we need a different solution
  - more on difficulty of satisfiability etc.: Theory of Computer Science course
  - practical algorithms: Foundations of AI course

# D2.2 Equivalences

M. Helmert, G. Röger (University of Basel) Discrete Mathematics in Computer Science November 25/27, 2024 14 / 21

# Equivalent Formulas

Definition (Equivalence of Propositional Formulas) Two propositional formulas  $\varphi$  and  $\psi$  over A are (logically) equivalent ( $\varphi \equiv \psi$ ) if for all interpretations  $\mathcal{I}$  for Ait is true that  $\mathcal{I} \models \varphi$  if and only if  $\mathcal{I} \models \psi$ .

German: logisch äquivalent

### Equivalent Formulas: Example

 $((\varphi \lor \psi) \lor \chi) \equiv (\varphi \lor (\psi \lor \chi))$ 

# Some Equivalences (1)

$$\begin{aligned} (\varphi \land \varphi) &\equiv \varphi \\ (\varphi \lor \varphi) &\equiv \varphi & \text{(idempotence)} \\ (\varphi \land \psi) &\equiv (\psi \land \varphi) \\ (\varphi \lor \psi) &\equiv (\psi \lor \varphi) & \text{(commutativity)} \\ ((\varphi \land \psi) \land \chi) &\equiv (\varphi \land (\psi \land \chi)) \\ ((\varphi \lor \psi) \lor \chi) &\equiv (\varphi \lor (\psi \lor \chi)) & \text{(associativity)} \end{aligned}$$

#### German: Idempotenz, Kommutativität, Assoziativität

M. Helmert, G. Röger (University of Basel) Discrete Mathematics in Computer Science November 25/27, 2024 17 / 21

### Some Equivalences (2)

$$\begin{aligned} (\varphi \land (\varphi \lor \psi)) &\equiv \varphi \\ (\varphi \lor (\varphi \land \psi)) &\equiv \varphi \\ (\varphi \land (\psi \lor \chi)) &\equiv ((\varphi \land \psi) \lor (\varphi \land \chi)) \\ (\varphi \lor (\psi \land \chi)) &\equiv ((\varphi \lor \psi) \land (\varphi \lor \chi)) \quad \text{(distributivity)} \end{aligned}$$

### German: Absorption, Distributivität

M. Helmert, G. Röger (University of Basel) Discrete Mathematics in Computer Science November 25/27, 2024 18 / 21

### Some Equivalences (3)

$$\neg \neg \varphi \equiv \varphi \qquad (\text{double negation})$$
  

$$\neg (\varphi \land \psi) \equiv (\neg \varphi \lor \neg \psi)$$
  

$$\neg (\varphi \lor \psi) \equiv (\neg \varphi \land \neg \psi) \qquad (\text{De Morgan's rules})$$
  

$$(\varphi \lor \psi) \equiv \varphi \text{ if } \varphi \text{ tautology}$$
  

$$(\varphi \land \psi) \equiv \psi \text{ if } \varphi \text{ tautology} \qquad (\text{tautology rules})$$
  

$$(\varphi \lor \psi) \equiv \psi \text{ if } \varphi \text{ unsatisfiable}$$
  

$$(\varphi \land \psi) \equiv \varphi \text{ if } \varphi \text{ unsatisfiable} \qquad (\text{unsatisfiability rules})$$

### German: Doppelnegation, De Morgansche Regeln, Tautologieregeln, Unerfüllbarkeitsregeln

# Substitution Theorem

#### Theorem (Substitution Theorem)

Let  $\varphi$  and  $\varphi'$  be equivalent propositional formulas over A. Let  $\psi$  be a propositional formula with (at least) one occurrence of the subformula  $\varphi$ .

Then  $\psi$  is equivalent to  $\psi'$ , where  $\psi'$  is constructed from  $\psi$  by replacing an occurrence of  $\varphi$  in  $\psi$  with  $\varphi'$ .

German: Ersetzbarkeitstheorem

(without proof)

D2. Properties of Formulas and Equivalences

### Application of Equivalences: Example

$$(P \land (Q \lor \neg P)) \equiv ((P \land Q) \lor (P \land \neg P))$$
$$\equiv ((P \land \neg P) \lor (P \land Q))$$
$$\equiv (P \land Q)$$

(distributivity) (commutativity) (unsatisfiability rule)
