### Planning and Optimization

September 18, 2024 — A2. What is Planning?

A2.1 Planning

A2.2 Planning Task Examples

A2.3 How Hard is Planning?

A2.4 Summary

M. Helmert, G. Röger (Universität Basel)

Planning and Optimization

September 18, 2024 2 / 29

#### Content of the Course

Planning and Optimization

#### Before We Start...

Prelude (Chapters A1–A3): very high-level intro to planning

- our goal: give you a little feeling what planning is about
- preface to the actual course
- main course content (beginning with Chapter B1) will be mathematically formal and rigorous
- ▶ You can ignore the prelude when preparing for the exam.

A2. What is Planning?

#### General Problem Solving

#### Wikipedia: General Problem Solver

General Problem Solver (GPS) was a computer program created in 1959 by Herbert Simon, J.C. Shaw, and Allen Newell intended to work as a universal problem solver machine.

Any formalized symbolic problem can be solved, in principle, by GPS. [...]

GPS was the first computer program which separated its knowledge of problems (rules represented as input data) from its strategy of how to solve problems (a generic solver engine).

- → these days called "domain-independent automated planning"

M. Helmert, G. Röger (Universität Basel)

A2. What is Planning? Planning?

So What is Domain-Independent Automated Planning?

Automated Planning (Pithy Definition)

"Planning is the art and practice of thinking before acting."

— Patrik Haslum

Automated Planning (More Technical Definition)

"Selecting a goal-leading course of action

based on a high-level description of the world."

— Jörg Hoffmann

#### Domain-Independence of Automated Planning

Create one planning algorithm that performs sufficiently well on many application domains (including future ones).

M. Helmert, G. Röger (Universität Basel) Planning and Optimization September 18, 2024

General Perspective on Planning

Sole source of change vs.
exogenous events
determinishic
vs. stochashic
observable

A2. What is Planning?

Planning

Example: Earth Observation

- ▶ satellite takes images of patches on Earth
- use weather forecast to optimize probability of high-quality images

M. Helmert, G. Röger (Universität Basel)

Planning and Optimization

A2. What is Planning?

## Example: Red-finned Blue-eye

Picture by ladine Chadès

- ► red-finned blue-eye population threatened by gambusia
- springs connected probabilistically during rain season
- ▶ find strategy to save red-finned blue-eye from extinction

M. Helmert, G. Röger (Universität Basel)

Planning and Optimization

A2. What is Planning? Classical Planning sole source of observable MAXIMIZE EXPECTED. MORIDAN REWARD M. Helmert, G. Röger (Universität Basel) Planning and Optimization September 18, 2024

A2. What is Planning?

## Model-based vs. Data-driven Approaches

Model-based approaches know the "inner workings" of the world → reasoning

Data-driven approaches rely only on collected data from a black-box world → learning

We focus on model-based approaches.

A2. What is Planning?

#### Planning Tasks

input to a planning algorithm: planning task

- ▶ initial state of the world
- actions that change the state
- goal to be achieved

#### output of a planning algorithm:

- plan: sequence of actions taking initial state to a goal state
- or confirmation that no plan exists
- → formal definitions later in the course

M. Helmert, G. Röger (Universität Basel)

September 18, 2024

A2. What is Planning? Planning

## The Planning Research Landscape

- one of the major subfields of Artificial Intelligence (AI)
- represented at major AI conferences (IJCAI, AAAI, ECAI)
- ▶ annual specialized conference ICAPS (≈ 250 participants)
- major journals: general Al journals (AIJ, JAIR)

M. Helmert, G. Röger (Universität Basel)

Planning and Optimization

September 18, 2024

17 / 29

A2. What is Planning?

#### Classical Planning

This course covers classical planning:

- offline (static)
- discrete
- deterministic
- ► fully observable
- single-agent
- sequential (plans are action sequences)
- domain-independent

This is just one facet of planning.

Many others are studied in AI. Algorithmic ideas often (but not always) translate well to more general problems.

M. Helmert, G. Röger (Universität Basel)

Planning and Optimization

A2. What is Planning?

ava Canaval Dlanning Tanias

More General Planning Topics

More general kinds of planning include:

- ▶ offline: online planning; planning and execution
- discrete: continuous planning (e.g., real-time/hybrid systems)
- deterministic: FOND planning; probabilistic planning
- single-agent: multi-agent planning; general game playing; game-theoretic planning
- ▶ fully observable: POND planning; conformant planning
- ► sequential: e.g., temporal planning

Domain-dependent planning problems in Al include:

- pathfinding, including grid-based and multi-agent (MAPF)
- continuous motion planning

A2. What is Planning? How Hard is Planning?

# A2.3 How Hard is Planning?

M. Helmert, G. Röger (Universität Basel)

Planning and Optimization

September 18, 2024

25 / 29

Classical Planning as State-Space Search

classical planning as state-space search:

where the management of the planning is planning?

where the planning is planning?

Classical planning as state-space search:

where the planning?

where the planning?

where the planning?

where the planning?

A2. What is Planning?

How Hard is Planning?

### Is Planning Difficult?

Classical planning is computationally challenging:

- number of states grows exponentially with description size when using (propositional) logic-based representations
- provably hard (PSPACE-complete)

→ we prove this later in the course

problem sizes:

- ► Seven Bridges of Königsberg: 64 reachable states
- ▶ standard benchmarks: some with  $> 10^{200}$  reachable states

A2. What is Planning? Summary

A2. What is Planning? Summar

### Summary

- planning = thinking before acting
- ► major subarea of Artificial Intelligence
- ▶ domain-independent planning = general problem solving
- classical planning = the "easy case" (deterministic, fully observable etc.)
- ▶ still hard enough!
  - → PSPACE-complete because of huge number of states
- ► often solved by state-space search
- number of states grows exponentially with input size
